Team Leadership

Kurt Von Schaeffer

Senior Full Stack Developer & Product Owner
// AI Automation Specialist

PROFILE

Senior full stack developer and product owner with 5+ years across the full software development lifecycle, now leading the development team and owning product at Mint. I architect and ship scalable fintech and biotech platforms end to end — and increasingly automate the work itself, building AI-driven systems that assign developer tasks, streamline onboarding, and generate invoices. Equal parts hands-on engineer, technical architect, and product owner, with a bias for clean code, sound architecture, and shipping.

PRODUCT & OWNERSHIP

AlgoLend for Business

PRODUCT OWNER

Bespoke, end-to-end digital credit and risk management platform for corporate lending. I own scope, roadmap, and delivery — a fully branded client lending portal front end backed by a credit, risk, compliance, and portfolio engine.

- Branded application portal with secure client login, configurable document workflows, and instant e-contract generation with digital signing.
- Compliance embedded at point of application: director identity & biometric liveness, CIPC checks, AML / PEP / sanctions and adverse-media screening, automated risk flagging.
- Open-banking integration (Tru ID) for real-time bank statement retrieval, automated income/expense categorisation, and affordability analytics.
- Built **DebiCheck** integration for authenticated, mandate-based debit-order collections, and **SACRRA** integration for compliant credit-bureau data submission and reporting.
- Configurable underwriting engine — scorecards, rule- and model-based decisioning, risk-based pricing, approval hierarchies, and a full audit trail.
- Portfolio & book management dashboard with live analytics, arrears and early-warning indicators, collections workflows, and role-based access control.

AI-Driven Developer Platform

ARCHITECT

Internal platform that uses AI to remove repetitive overhead from the development workflow, freeing the team to focus on building.

- AI automation that triages and auto-assigns development tasks across the team based on workload and skill set.
- Automated onboarding flows for new team members and clients, and automated invoice generation.

EDUCATION

National Diploma in Software Development

Rosebank College
2015 – 2020

National Certificate in Graphic & Web Design

CTU Training Solutions
2012

National Senior Certificate

Hoërskool Hangklip
2006 – 2010

— WORK EXPERIENCE

Senior Full Stack Developer & Product Owner

2025 – Present

Mint

- Lead and mentor a team of developers across full-stack projects, setting technical direction and owning code quality.
- Sole architecture owner for all development — designing scalable, secure, maintainable systems across fintech and biotech products.
- Product owner for AlgoLend for Business — driving roadmap, requirements, and delivery from concept through release.
- Built AI automation into the team's own workflow — task assignment, onboarding, and invoicing — and set coding standards, DevOps practices, and documentation frameworks.

Software Developer

2024 – 2025

Navertica cc SA

- Developed and customised Microsoft Dynamics NAV / Business Central features and modules to client requirements.
- Worked alongside consultants to gather client requirements and design tailored NAV / BC solutions for each engagement.
- Built custom reports (including Crystal Reports) and troubleshooted functional issues directly with end users.
- Wrote clean, version-controlled code with comprehensive technical documentation; deployed to client environments and iterated on feedback.

Systems Engineer / Software Developer

2022 – 2023

Capital Legacy

- Researched, designed, implemented, and managed software programmes aligned to business requirements across the estate-planning business.
- Identified and built modifications to existing systems to improve performance and functionality.
- Configured servers and databases, authenticated data, and preserved data integrity across sensitive financial records.
- Deployed software tools, processes, and metrics; maintained and upgraded production systems under strict data-governance standards.

Layout & Design Roles

2019 – 2022

Amrod

- HP READY Graphic Layout Artist — prepared and preflighted print-ready artwork, adapting assets across multiple platforms and applying brand guidelines (fonts, colours, imagery) consistently.
- Collaborated with designers, managers, and printers on template-based creative projects; maintained the digital image library and assessed typeface, colour, and layout against client specs.
- Progressed from Junior Layout Administrator, liaising between layout and production and managing stock movement and artwork queries.
